LAPAROSCOPY SURGERY

aka. Keyhole Surgery

Offers your pet a significant reduction in pain post surgery

What is Laparoscopy?

Laparoscopy is a minimally invasive surgical technique that allows visualisation of the entire abdomen through 2-3 very small incisions. The abdomen is inflated with CO² and a camera and surgical instruments are passed through the incisions to carry out the procedure.

There are many procedures that can be done laparoscopically or lap assisted, including:

- Ovariectomy (spay)
- Removal of abdominally retained testicle
- Organ biopsies
- Internal bladder exam
- Exploratory laparotomies
- Foreign body removals
